

Geomatic seminar and the Dissemination event in Czech Republic, held on 25th July 2013, organized by RDA Usti

The Geomatic seminar and the dissemination event took place at the Hop Research Institute in Žatec, Usti Region, Czech Republic on July 25th, 2013. The organizers made use of the opportunity, when partners of the GRISI PLUS project from other European regions were on the study visit in the Usti Region, to invite them to the seminar and the dissemination event to make 3 presentations about good practices, proved in their regions. So, participants of the dissemination event, e.g. mayors, officers of the Regional Office of Usti Region, representatives of NGOs, had a rare opportunity to ask questions directly to people from regions, who presented their good practices.

The main goals of the geomatic seminar and the dissemination event were fulfilled - information on principles of geomatic tools and their practical use and introduction the goals, and objectives of the GRISI PLUS project and some examples of Good Practices from other EU regions to the participants, were presented.

During the event, also some Czech projects working with geomatic tools were presented. The participants of the event were informed about the creation of the action plan to support transmission of some of good practices to the Usti Region and asked to help with the identification of the most suitable good practice or practices for the transmission. The communication with participants and organization of dissemination events will continue, to become the most important tool for successful implementation of project activities.
